

DATE: August 23, 2017
TO: 123rd Area Property Owners
SUBJECT: 2018 Street Reconstruction – Preliminary Design Review

The streets and utilities in your neighborhood have been proposed for reconstruction in 2018 as part of the City's 5-year Capital Improvement Program. The map on the reverse side of this notice indicates the streets impacted by this project. City staff have begun the preliminary design review process to determine the extent of possible improvements. As part of the preliminary review work, you may notice some of the following items occurring in your neighborhood over the next four to six months:

- Paint markings and flags for utilities in the street right-of-way and around your property.
- Survey stakes and markings placed in the street right-of-way or near property lines.
- The City's sewer televising contractor performing cleaning and televising of sanitary sewer and storm sewer pipes.
- City maintenance staff inspecting manholes, catch basins, hydrants, gate valves, and water shutoff valves/curb stops.
- The City's tree trimming contractor performing tree branch trimming above streets and sidewalks.

With respect to utility flags and survey stakes, **please do not throw away these items**. If you would like to remove these items temporarily to mow your lawn, please replace them in their original location. Survey stakes do not indicate any specific type of proposed improvement. They are placed by our City survey crews and used as reference points for surveying. City staff will remove them when they are no longer needed.

Recent projects in neighborhoods similar to yours have resulted in assessments in the range of \$1,500 to \$5,000 for a typical city lot. **Assessments are based upon the lot frontage. Therefore, estimated individual lot assessments are not available at this time.** In late December 2017 you will be invited to an Open House where City staff will review and discuss the proposed improvements and estimated cost, as well as identify any specific property owner concerns or potential impacts due to the proposed work. In February 2018 you will receive a notice of a formal Public Hearing, where the merits of the project will be considered and voted on by the City Council.

The City has set up a website to keep property owners informed of improvements affecting their neighborhood. Please visit this website at www.burnsville.org/streetrecon for maps of current and future project areas, list of frequently asked questions, and the latest updates and information about the City's street and utility reconstruction program. If you have any additional questions, please feel free to contact the City of Burnsville Engineering Department at 952-895-4534.
